

How it Works

Standard wheelchair

STRONGBACK wheelchair

Standard wheelchairs have a backrest that does not optimally support the user's spine, resulting in a hunched posture with the head and shoulders bent forward. This unfavorable sitting position can cause pain and other health problems.

The STRONGBACK wheelchair is the first lightweight folding wheelchair that effectively supports the user's back. Its unique ergonomic shape promotes a healthy upright sitting position and ensures unique comfort and convenience from the very first moment.
